Water Pollution Control Plant Digester Boiler and Heat Exchanger

Resolution/Work Order #76324

Council District # City Wide

The contractor shall furnish all labor, insurance, equipment, materials and power for the completion of the project: "Water Pollution Control Plant Digester Boiler and Heat Exchanger Improvements" as follows: This work is generally described as new boilers and heat exchangers, including removal of existing boilers, two new water-to-sludge heat exchangers, two new dual-fuel (digester gas and natural gas) boilers, new hot water recirculation pumps, associated piping, valves, instrumentation, electrical, and controls at the Fort Wayne Water Pollution Control Plant.

<u>Implications of not being approved</u>: This project is the next phase of improvements to the digester complex at the Water Pollution Control Plant to improve digester gas production, energy efficiency, and increased energy generation. The new boilers will replace boilers that have high maintenance costs, low efficiency, and reached end of life. The addition of new heat exchangers will provide needed heat transfer capacity to maintain process temperatures as future rates to the digesters increase.

If Prior Approval is being Requested, Justify: N/A
